AI-POWERED BRAND GOVERNANCE

SkyNex AI

Review Content. Verify Claims. Track Recurring Issues.

An intelligent approach to keeping brand communication accurate, consistent and trustworthy.

INKLOOM AI HACKATHON · ROUND 1: THE PLAN

Team & Participant Details

Different strengths. One shared vision for smarter brand governance.

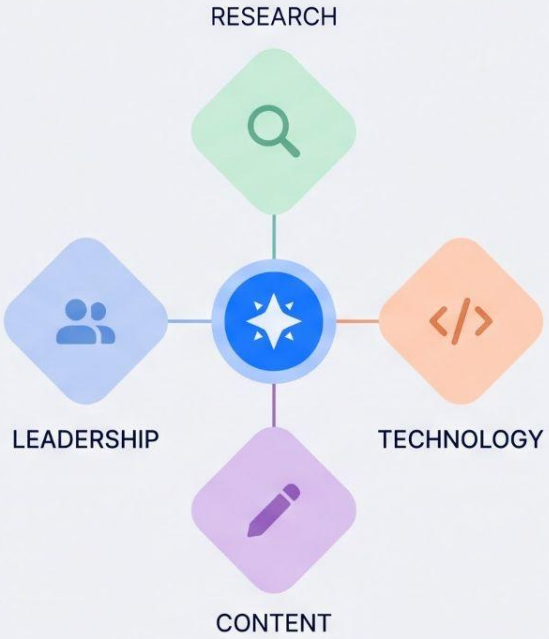

TEAM INFORMATION

TEAM NAME:
SkyNex AI

PROJECT TITLE:
AI-assisted Brand Governance

INSTITUTION:
Sushant University

EVENT / ROUND:
Codex 48 – Round 1

OUR TEAM

01
Shubham Kumar
Team Leader
Team coordination, planning & final PPT.

02
Naman Tyagi
Researcher
Problem research, competitor analysis & references.

03
Ankita Sinha
Content & PPT Designer
Content writing, slide design & flowcharts.

04
Anmol
Technical Lead
Tech stack, solution workflow, features & One-Click Change explanation.

SkyNex AI

More People. More Content. Harder to Stay On-Brand.

As organisations grow, keeping every piece of content consistent becomes harder.

1. MANY PEOPLE CREATE CONTENT

Content Writer · Marketing Team · AI Content Tool

Employees · Agencies · AI tools

2. BRAND INFORMATION IS SCATTERED

Different tools · Different versions

3. KEEPING EVERYTHING CONSISTENT GETS HARDER

One brand. Many content sources.

The challenge is keeping everyone aligned with the same approved brand information.

Who Feels the Friction?

Keeping content consistent takes teamwork.

WHO IS AFFECTED?

CREATORS

Writers · Designers · Marketers

↓

REVIEWERS

Brand · Product · Legal

↓

MANAGERS

Marketing · Brand leaders

WHAT THE RESEARCH SAYS

40%

Say communication across departments is a challenge.

33%

Report content workflow or approval challenges.

Content Marketing Institute · 2025 · 980 B2B marketers

Brand consistency is a team-wide challenge, not just a writing problem.

Existing Tools vs. SkyNex AI

Building on existing brand-governance capabilities with a focus on recurring problems.

WHAT THE MARKET OFFERS

- **Markup AI** — Brand voice and content review
- **Presspage** — Brand compliance and approvals
- **Frontify** — Brand guidelines and AI assistance
- **Bynder** — Visual and asset compliance
- **Brand Rover** — Live website and ad monitoring

WHAT SKYNEX AI CONNECTS Our Proposed Focus

CHECK • Compare content with approved brand rules.

↓

SUGGEST • Explain issues and propose corrections.

↓

TRACK • Remember findings across drafts and detect recurring issues.

↓

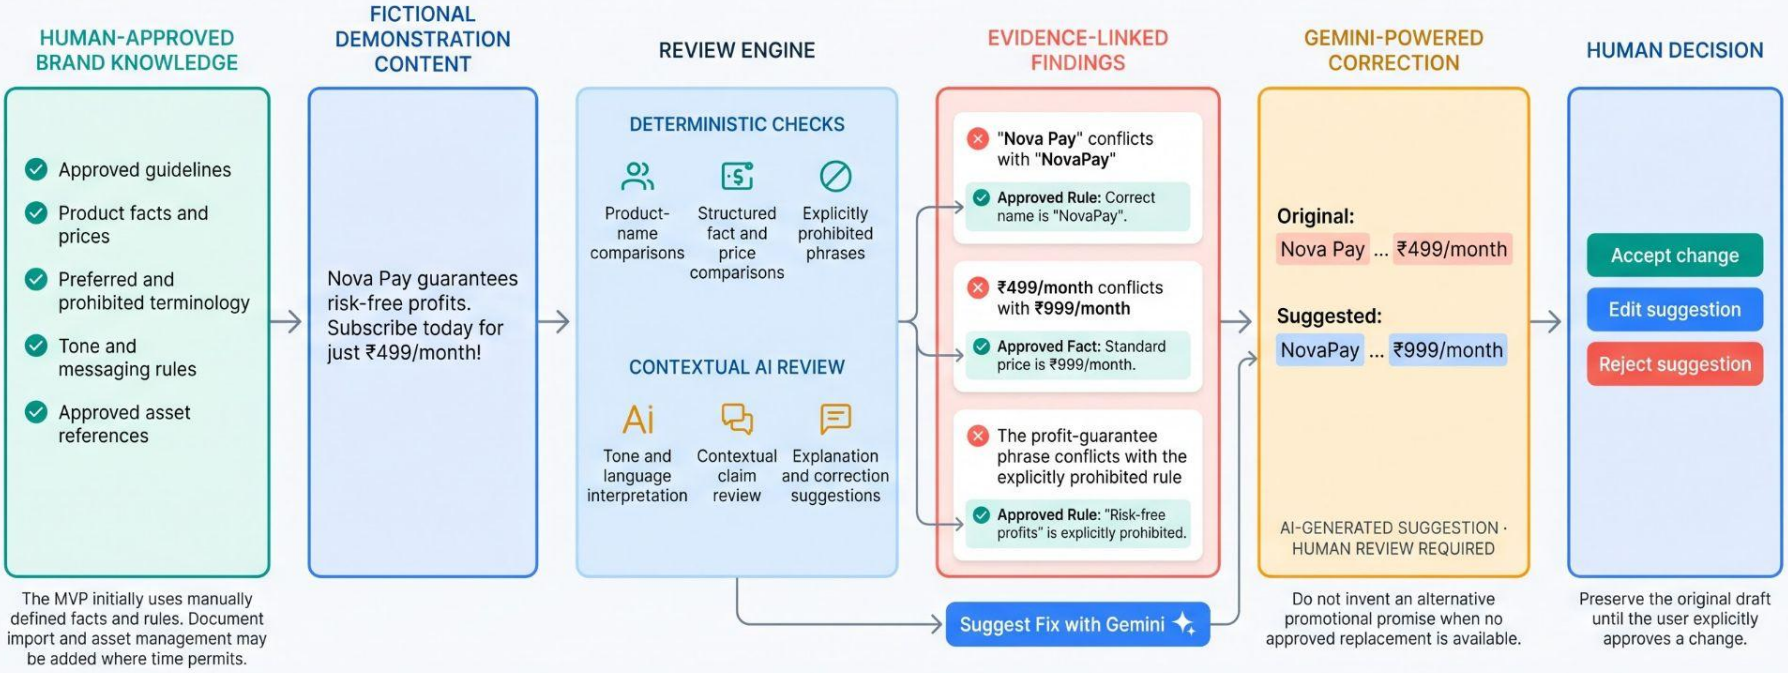

ALERT • Notify managers when repeated problems need investigation.

⚠ Unverified claims → Human review

"Our focus is connecting content corrections with recurring-issue **tracking and manager-led improvement.**"

Check the Draft. Show the Evidence. Suggest the Fix.

Approved brand knowledge, deterministic checks and Gemini-assisted correction.

The MVP initially uses manually defined facts and rules. Document import and asset management may be added where time permits.

Do not invent an alternative promotional promise when no approved replacement is available.

Preserve the original draft until the user explicitly approves a change.

FUTURE SCOPE: Advanced image, visual-consistency and accessibility checks are future extensions, not assumed MVP functionality.

Every finding has a reason. Every correction remains under human control.

From Draft to Approval, With Every Decision Recorded

Creators, reviewers and brand owners work through one traceable review process.

CREATOR

- Submits a draft.
- Reviews flagged issues.
- Applies or edits suggestions.
- Responds to comments.

REVIEWER OR MANAGER

- Inspects findings and supporting evidence.
- Adds comments.
- Requests revisions.
- Accepts or rejects corrections.
- Approves or rejects the content.

BRAND ADMINISTRATOR

- Maintains approved rules and facts.
- Updates terminology and guidance.
- Manages relevant rule versions.
- Controls access within the proposed permissions model.

REVISION HISTORY MOCKUP

Draft version
v1.0 submitted by Creator - [Time stamp]

Flagged issue
AI: Potential compliance risk detected - Rule 4.2 (Tone of Voice)

Suggested correction
AI: Rephrase to maintain neutrality. Suggested wording: "...offers options for..."

Reviewer comment
Reviewer: Please clarify the source for this claim. Also, consider the tone.

Human decision
Creator: Adjusted for clarity. Source added in footnote.

Applicable brand-rule version
Approved under: Brand Guidelines 2024 Q3, v2.1

AI suggestions do not override human decisions.

Be clear that role-based review workflows are proposed. A prototype's role selection is not equivalent to production-grade authentication or enterprise permissions.

Do not imply automatic publication.

Turn Repeated Mistakes Into Learning Opportunities

Brand Clarity Loop: from recurring findings to human-confirmed improvements.

STAGE 1: TRACK FINDINGS

- Issue category
- Approved rule
- Content type
- Campaign
- Reviewer decision

STAGE 2: DETECT RECURRING PATTERNS

Rule · Issue category · Campaign · Content type · Recorded creator or team

STAGE 3: ALERT THE MANAGER

RECURRING TERMINOLOGY ISSUE

Several drafts contain the same unapproved product name.

5 findings · **3** creators · **2** campaigns

FICTIONAL DEMONSTRATION DATA

- **Number of findings:** 5
- **Related campaigns:** "Q3 Launch", "Holiday Promo"
- **Relevant approved terminology:** "SkyNex AI Platform"
- **Links to supporting review records:** [View Records]

STAGE 4: INVESTIGATE THE CAUSE

Manager

- **The rule is unclear** (Requires confirmation)
- **Approved information is difficult to find** (Requires confirmation)
- **The reference is outdated** (Requires confirmation)
- **Employees may need clarification or training** (Requires confirmation)

STAGE 5: TAKE CORRECTIVE ACTION

- Clarify the guideline
- Update approved information
- Organise an employee learning session

STAGE 6: TRACK FOLLOW-UP

- Record the chosen action
- Examine subsequent review records for recurrence

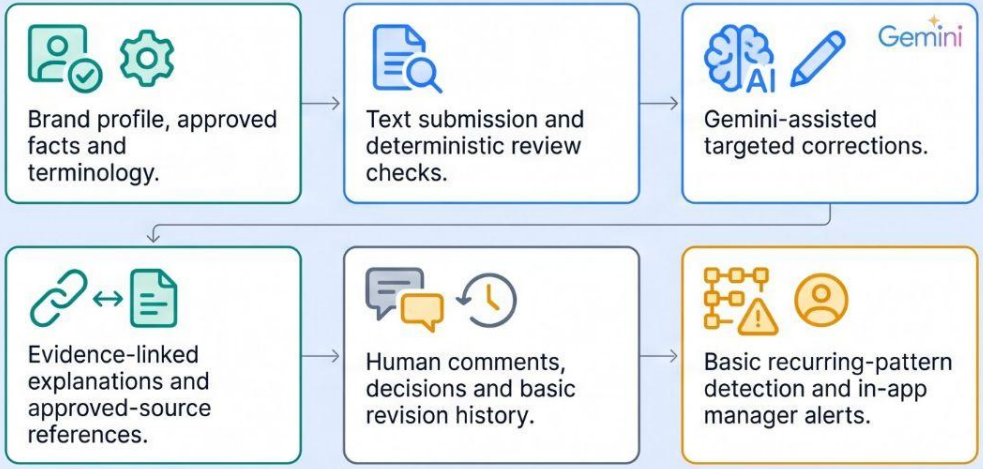

SkyNex AI helps teams investigate why the same brand mistakes keep happening.

MVP Scope and Validation

Start with a reliable text-review workflow, then expand.

SECTION A: MVP

MVP Scope (Core Capabilities)

EVALUATION MEASURES

- Detection of deliberately seeded issues.
- Accuracy of evidence references.
- False-positive findings.
- Correction suitability.
- Successful recording of reviewer decisions.
- Recurrence of issues after corrective action, if follow-up data becomes available.

Report results only after testing. No accuracy or improvement figures are assumed in advance.

DEFERRED FEATURES (Future Extensions)

- Complex PDF/DOCX extraction.
- Advanced logo and image analysis.
- Broader visual-consistency checks.
- Advanced accessibility analysis.
- Multilingual governance.
- Enterprise integrations and advanced permissions.
- Richer analytics.

SECTION C: VALIDATION MATRIX

Test scenario	Expected result
Incorrect product name	Flag terminology conflict
Incorrect price	Show approved price
Prohibited claim	Identify the relevant rule
Correct supported content	Avoid invented violations
Missing or conflicting source	Request human verification
Repeated terminology issue	Highlight pattern for investigation
Gemini API unavailable	Continue available checks; mark AI correction unavailable
Rejected suggestion	Preserve original content
Reviewer decision	Save the decision and relevant version

Technical Approach: How We Build SkyNex AI

Python checks the rules. Gemini analyses the context. SQLite remembers recurring issues.

1. SUBMIT

Streamlit

Creators submit a draft.

Brand managers maintain approved names, prices and brand rules.

2. CHECK

Python + Gemini API

Python: checks names, prices and prohibited phrases.

Gemini: analyses context, tone and possible unsupported claims.

3. VALIDATE

Pydantic + Human Review

Validate the AI response structure and check references against approved rules.

Aero Sip → AeroSip

Accept | Edit | Reject

The creator can accept, edit or reject the suggestion. Unverified claims go to manual review.

4. REMEMBER

SQLite + Python

Save findings and review decisions.

Group matching issues across drafts and alert a manager when a configured threshold is reached.

Repeated Issue detected

Inform Rules

Feedback

Development Plan | Three Rounds

From a clear plan to a working product and final delivery.

ROUND 1

THE PLAN

- Define the problem and target users.
- Finalise the solution, workflow and technology stack.
- Establish scope, responsible design and expected impact.

OUTCOME:
A Clear Product Plan

ROUND 2

THE BUILD

- Develop a functional SkyNex AI product.
- Integrate the core workflow and AI services.
- Demonstrate functionality and test the main features.

OUTCOME:
A Working Product

ROUND 3

THE FINISH

- Refine reliability and usability.
- Present testing results and improvements.
- Deliver documentation, a demo and the future roadmap.

OUTCOME:
A Validated Final Submission

PLAN → BUILD → REFINE & DELIVER Each round moves SkyNex AI closer to a complete, reliable and demonstrable solution.
